

NOTICE OF "FREEZING" COLORADO'S CASE RECORDATION, MINING CLAIM RECORDATION SYSTEM, AND ON-LINE RECORDATION AND CASE ACCESS

On September 23, 1998, a "snapshot" will be taken of Case Recordation (CR) and Mining Claim Recordation System (MCRS) data bases pending conversion to the Automated Land and Mineral Record System (ALMRS) Release 1. Taking "snapshots" of these data systems means:

The National Information Resource Management Center (NIRMC) Project Office will take a "snapshot" of the data on the above mentioned date and provide a tape of the CR and MCRS data to Computer Science Corporation (CSC) to begin the data conversion process. All of the data in these data bases will be converted into the ALMRS Release 1 software.

Updates to On-line Recordation Case Access (ORCA), after the close of business September 18, 1998, and updates to CR and MCRS data bases after the close of business September 23, 1998, will continue. This includes updates/changes/modifications to existing cases in ORCA, CR, and MCRS, or new applications not yet serialized, which occur after close of business September 18, and 23, 1998. These updates will not be in the ALMRS data base at initial deployment (currently scheduled for January, 1999), but will be entered after deployment. Therefore, customers using ORCA, CR, and MCRS will not be affected by the "freeze" until the January 1999 deployment date. At that time, the following method will in place to gather all the data that was not included in the original "snapshot".

All updates/changes/modifications will be tracked. The tracking method will be to update ORCA, CR, and MCRS and then generate a serial register page. The serial register page becomes the tracking mechanism and is maintained in a book or folder with the changes identified for entry after deployment. Additional information will be provided nearer to deployment. Requests for information pertaining to ORCA, CR, MCRS, or ALMRS, contact Adrian Caufield on (303) 239-3941 or Darlene Alcott on (303) 239-3648.
